Authorization for this examiner's amendment was given in a telephone interview with Mr. David Cushing on 22 February 2006.

Please amend claims 14 and 15:

14. (Currently Amended) A digital to analog converter circuit, comprising:
a plurality of digital to analog converters whose outputs collectively form an output of said digital to analog converter circuit; and
a distribution circuit for distributing digital input values of said digital to analog converter circuit to said plurality of D/A converters such that, in the case of a continuous incrementing of said input values by a given increment amount, the individual input values of the plurality of digital to analog converters are incremented in turn by said given increment amount, wherein said distribution circuit comprises a divide-by-n counter responsive to said input values of said converter circuit to provide n counter outputs, and n further counters each responsive to a respective one of said n counter outputs, an output from each of said n counters being coupled to a respective one of said plurality of D/A converters.
